Dear Dr. Zhang,

Authors like you are a crucial part of AIP's Applied Physics Letters. Without your article "Terahertz superconductor metamaterial", which was one of APL's monthly top 20 most-downloaded articles last year, APL would not be one of the most highly cited journals in its field. Because we recognize and appreciate the high quality of your work, we'd like to invite you to submit your most current research to the inaugural issue of our new journal, AIP Advances.

AIP Advances is a fast-track, community-based, open access journal, focusing on research in applied physical science. We believe that your high-caliber work will benefit not only from swift processing via our streamlined peer review process, but also from unique post-publication commenting and rating features, which will allow your article to rise to prominence on its own merits.

At your request, we would also be happy to promote your work. We will interview you and post a podcast on the AIP Advances website, along with a short bio.

Again, we hope you'll consider submitting your next manuscript to AIP Advances. As an added incentive, we're offering free publication to the first 100 authors whose articles are accepted.

For more information, please visit the journal's homepage.

Sincerely,

Mark Cassar
Publisher, Journals and Technical Publications
American Institute of Physics
